ADVANCED ANALYTICS

The SCI advanced analytics process suggests relationships and provides insight into previously hidden data. This process involves several approaches: mathematical and statistical methods, as well as machine-driven techniques, such as deep learning and blockchain technology.

Newly implemented regulations, such as GDPR, are the driving force behind the need for blockchain, a technology that improves transparency in data analysis. Combined with predictive analytics, we enable enterprises to forecast trends and behaviors, predict future behavior, and better navigate toward success.

🕒 AI, Machine Learning, & Application Development

Scale your organization's operations, people, and expertise with custom AI solutions.

🕒 Business Analytics & Data Visualization

Transform information into actionable, robust insights.

🕒 Data Platforming & Integration

Store, manage, govern, and secure your data estate.

🕒 Financial & Operational Performance Management

Forecast, increase visibility, and enable better business decisions.

APPLICATION MODERNIZATION

SCI's application modernization services address the challenges companies face when migrating from and modernizing legacy workloads to new applications or platforms, including the integration of new functionality to provide the latest solutions. Increase your business agility by delivering applications and services faster, optimizing applications for the cloud, and offering your end customers market-responsive digital products and services.

Application Modernization

Refactor or replatform existing client applications

DevOps

Tools and processes to deliver applications and services faster

Container Platforms & Kubernetes

Build and run native applications at scale

Integration & Middleware

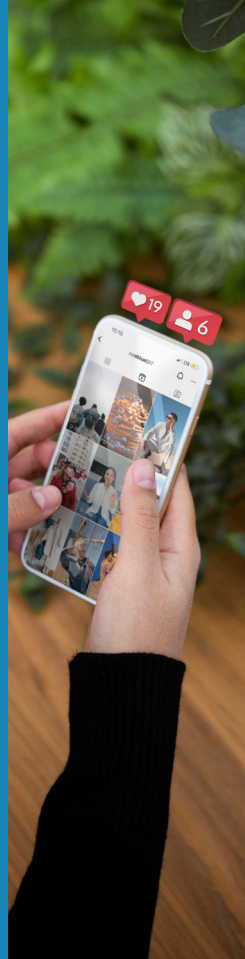

Build integrations between cloud and on-premise applications

IT Automation & Orchestration

Automate repeatable processes and reduce manual intervention

Observability & Intelligent Operations

Improve application performance and optimize for cloud

CLOUD PLATFORMS

There has been a significant evolution in the way in which we save, store, and access data. Businesses are growing more and more reliant on external sources of infrastructure. Our multi-faceted cloud practice is built by a team of Solution Architects ready to enable your organization to adopt new strategies and approaches that embrace cloud technologies

- Public, & hybrid solutions
- Modernize/ re-factor client applications
- Migrate workloads off premises
- Protect and secure client information across platforms
- Focus on availability, security, performance and cost optimization

CYBERSECURITY

Our cybersecurity arsenal is comprised of an evolving collection of defense tools, risk-management approaches, technologies, training, and best practices. We adopt a custom strategy based on clients' specific security needs that is designed to protect networks, devices, programs, and data from attacks or unauthorized access. This approach includes critical infrastructure security, network security, application security, information security, cloud security, data loss prevention, and end-user education.

DIGITAL INFRASTRUCTURE

SCI's digital infrastructure solutions enable the delivery of applications through secure, mobile, reliable access, allowing clients to achieve enhanced business outcomes. Digital transformation is the core tenant of SCI's approach to digital infrastructure; we believe these solutions should accelerate the value chain of delivering products and services from our clients' partners and suppliers to their end customers.

DIGITAL WORKPLACE

SCI's Digital Workplace practice provides solutions encompassing the digital worker. Today, the traditional worker has matured into a digital worker that is able to work anywhere, yet requires security, collaboration, productivity, and ease of tools access. This practice focuses on how to provide the best digital worker experience, while ensuring clients' core business values. Solutions encompass Instant Messaging (IM), Email, File Collaboration, Voice & Video Collaboration, End User Management, and Subscription services.

MANAGED SERVICES

SCI managed services offers the ability to provide 24x7 monitoring, remote management, and engineering services using service desk-initiated, ticket-based support for remediation or escalation of alerts, system conditions, and vendor management. Take advantage of our experience, expertise, and business focus to make a difference for your organization.

TALENT SERVICES

Finding the right talent can be a tedious process. At SCI, our Talent Services team delivers nationwide technology staffing services to help our clients build, transition, and transform through people. In addition to our investments in emerging technologies and analysis of the latest market trends, we collaborate with a wide network of talent that spans all aspects of IT while offering flexible delivery options to achieve our clients' highly responsive business needs. Our team has built numerous relationships with senior recruiters, top partners, and in-house consultants to give our clients a competitive edge while saving them both time and money.

E-LEARNING SERVICES

SCI's development line has produced e-learning applications and implemented systems to support a multitude of requirements across many industries. SCI has built public and organizational (including internal) facing applications to support government, education and industry and providing information, collecting information, providing e-learning opportunities for the public and employees.
